SCRUM

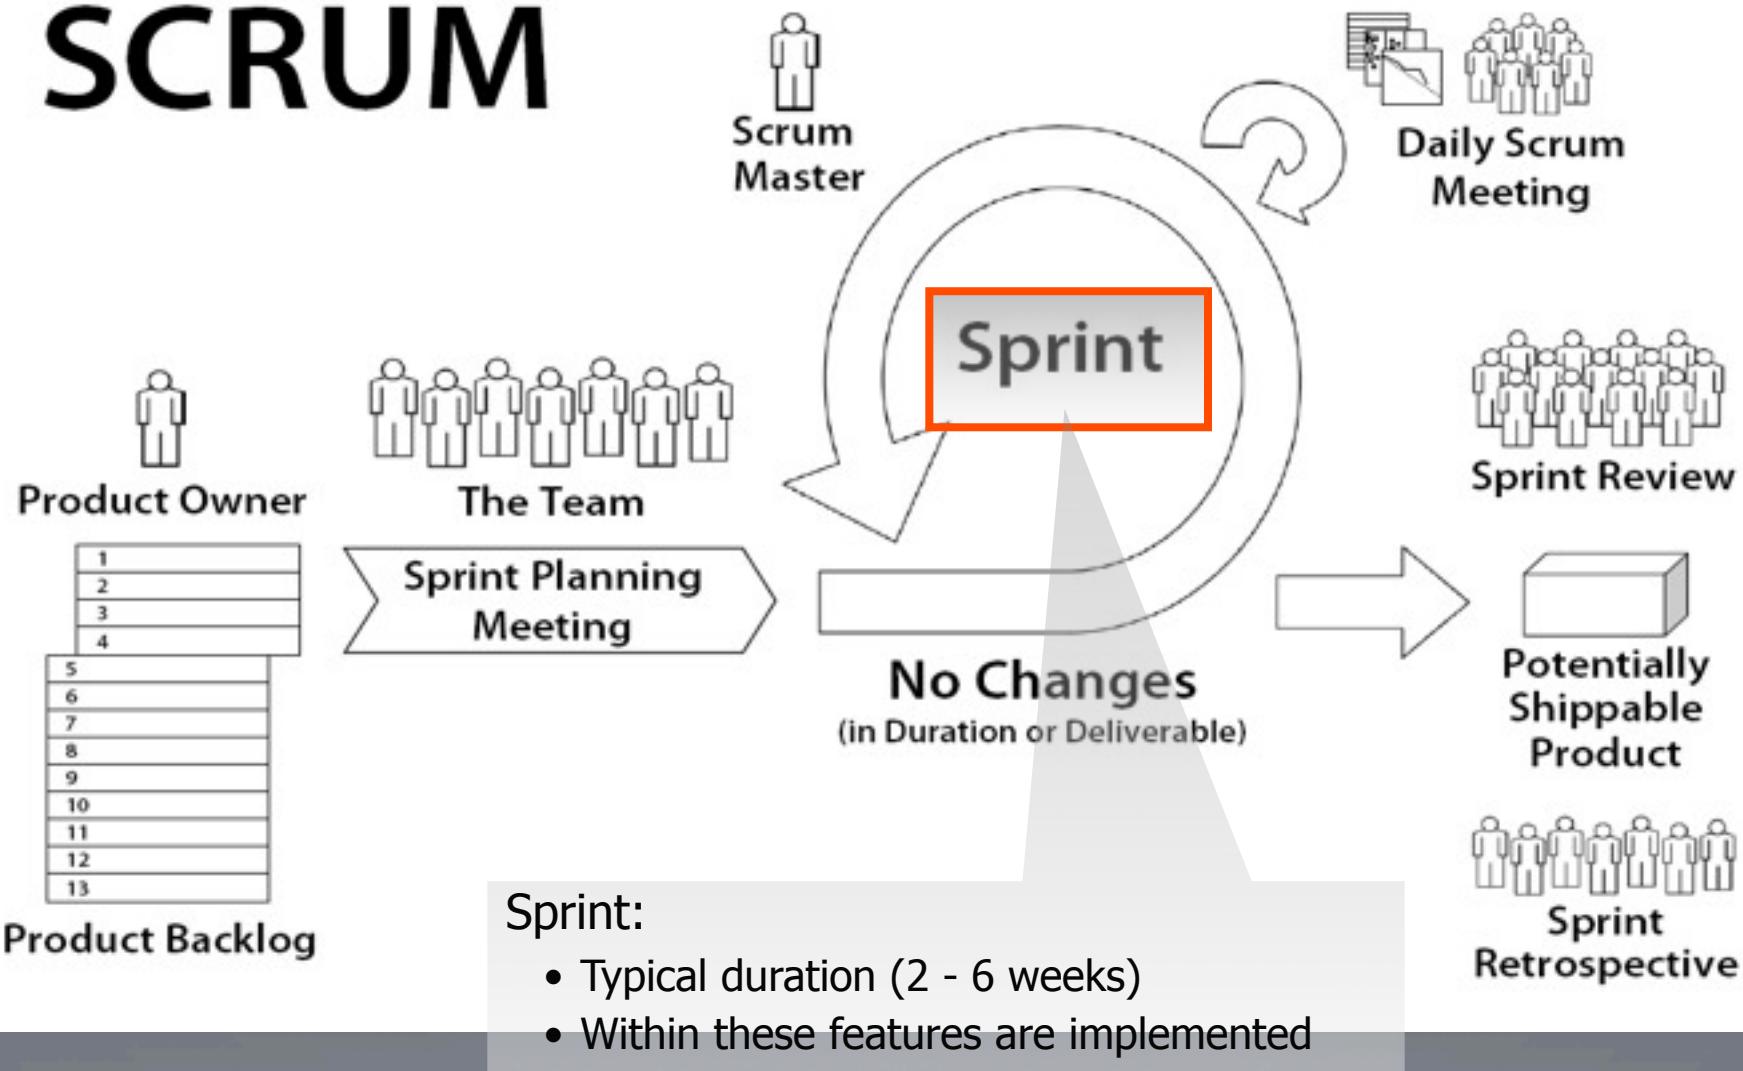

SCRUM

Advantages

- **Closer involvement of client**
- Client can influence priority (via product owner)
- Client sees regularly that the „right“ product is developed
- Results and also problems are immediately visible
- **Slim planning procedure**
- **Quick reactions possible in case of changes**

Consequences

- Requirements are not fixed in detail at project start
 - Rough Feature Set and plan at project start
 - Requirements are refined during the whole development phase
- Client is involved actively in project
 - Often to every Sprint Planning Meeting
- Client has to be ready to test and evaluate also early prototypes
